

Phases of War

We can compare our war to a chess game. The war scenario of chess symbolizes the wars between nations. Chess has 3 phases: The opening, the middle game and the end game. As for us we have the starting phase where the military units or pieces develop and position take place; the attacking phase where manoeuvre is used to defend against and target an opponent nation or weak points; the final phase where generally after several military units exchanges, the dominant nation wins (Kreuter, 1991).

Consequences of War

The short-term repercussions of war are horrific, including the damage of physical infrastructure, the weakening of economic and political institutions, and the evident loss of human life (Barceló, 2021).
